

PM Tool Observations:

1. STD Test Cases:

a) Observations informed on 17-01-2025:

1. SRS document TAGS are not getting reflected in New Test Cases GUI even after base lined.
2. The test case number is having a plus sign to its left which does not go away and repeats a recursive.

b) Observations informed on 03-03-2025:

3. In generated test case report for 7.6.18, Sl.no is not in order for Input and Output parameters in many of the test cases.
4. If Same Input/output parameter added more than one time with different value & time in a test case. In test case report, input/output parameters with same names are shown together instead of showing in the respective positions/ rows.
5. If Same input/output parameter added more than one time in a test case, not saving the remarks for second entry.
6. Not able to export test cases of one build to the next build due to the sl no.3 of Word editor issue.

2. Word Editor:

a) Changes informed on 30-01-2025:

1. Document prepared in word editor should be exported, to save it as a word doc/ pdf doc.
2. Requirements updated for the current build in word editor should be fetched and change notice of SSS, SRS & other applicable documents to be generated as per the change notice template given.

b) Observations informed in Jan 2025:

3. Not able to read across Requirements/ Requirement document of one build to the next build.
4. Subsection is listing as a separate main section instead of listing under the main section in the section tree.

c) Observations informed on 03-03-2025:

5. Unable to tag the sections in V7.6.19 build SSS and SRS change notice documents. But previous V7.6.18 build SSS and SRS change notice documents sections were tagged properly.

d) Observations informed on 21-03-2025:

6. Sl no. is missing in the tables of some sections.

3. Software Flashing:

a) Observations informed on 10-03-2025:

1. Unable to download the files attached in the task for software flashing.
